Seeking a Primary Caregiver for Children ages 8 to 12 to participate in a survey about the tic severity of children and the impact on academic functioning

My name is Courtney Thompson, and I am a doctorate student at the Illinois School of Professional Psychology at National Louis University. I am currently seeking participants for my dissertation research. The current research aims to measure a child's quality of life from the caregiver's perspective to determine if there is an association between tic severity and social, emotional and academic functioning, and the child's grades. If you choose to participate, you will be asked to provide demographic information and responses to questionnaires; however, the survey does not ask for any information that would identify who the responses belong to. This will take approximately 25 minutes of your time. All information will be kept anonymous and confidential.

My dissertation chair, Dr. Vitalis, can be reached at evitalis@nl.edu. Please feel free to pass this information on to others who might be interested. Please reach out to me at cthompson37@my.nl.edu if you have any questions.
